

Cloudflare Integration with AlienVault

AlienVault

Plugin normalizes the events data and sends for further processing

Splunk Add-on

AlienApp makes REST API call to CloudFlare to get the events data in JSON format

AlienApp passes raw data to the Plugin

Customer

Customer provides phenomenal Threat Intelligence, collaborative defence & effective security for organizations of all sizes

The customer requested for the integration of Cloudflare with its platform

Requirement

Technology Solution

- Sacumen developed the AlienVault's AlienApp based on Spring Batch framework (Java) and integrated with the AlienVault's Connector framework
- The Connector made REST API calls to the Cloudflare's endpoint URL to get the Edge HTTP logs
- Connectors took to take care of the scheduling, rate limiting, retries and other important design attributes to build a robust solution
