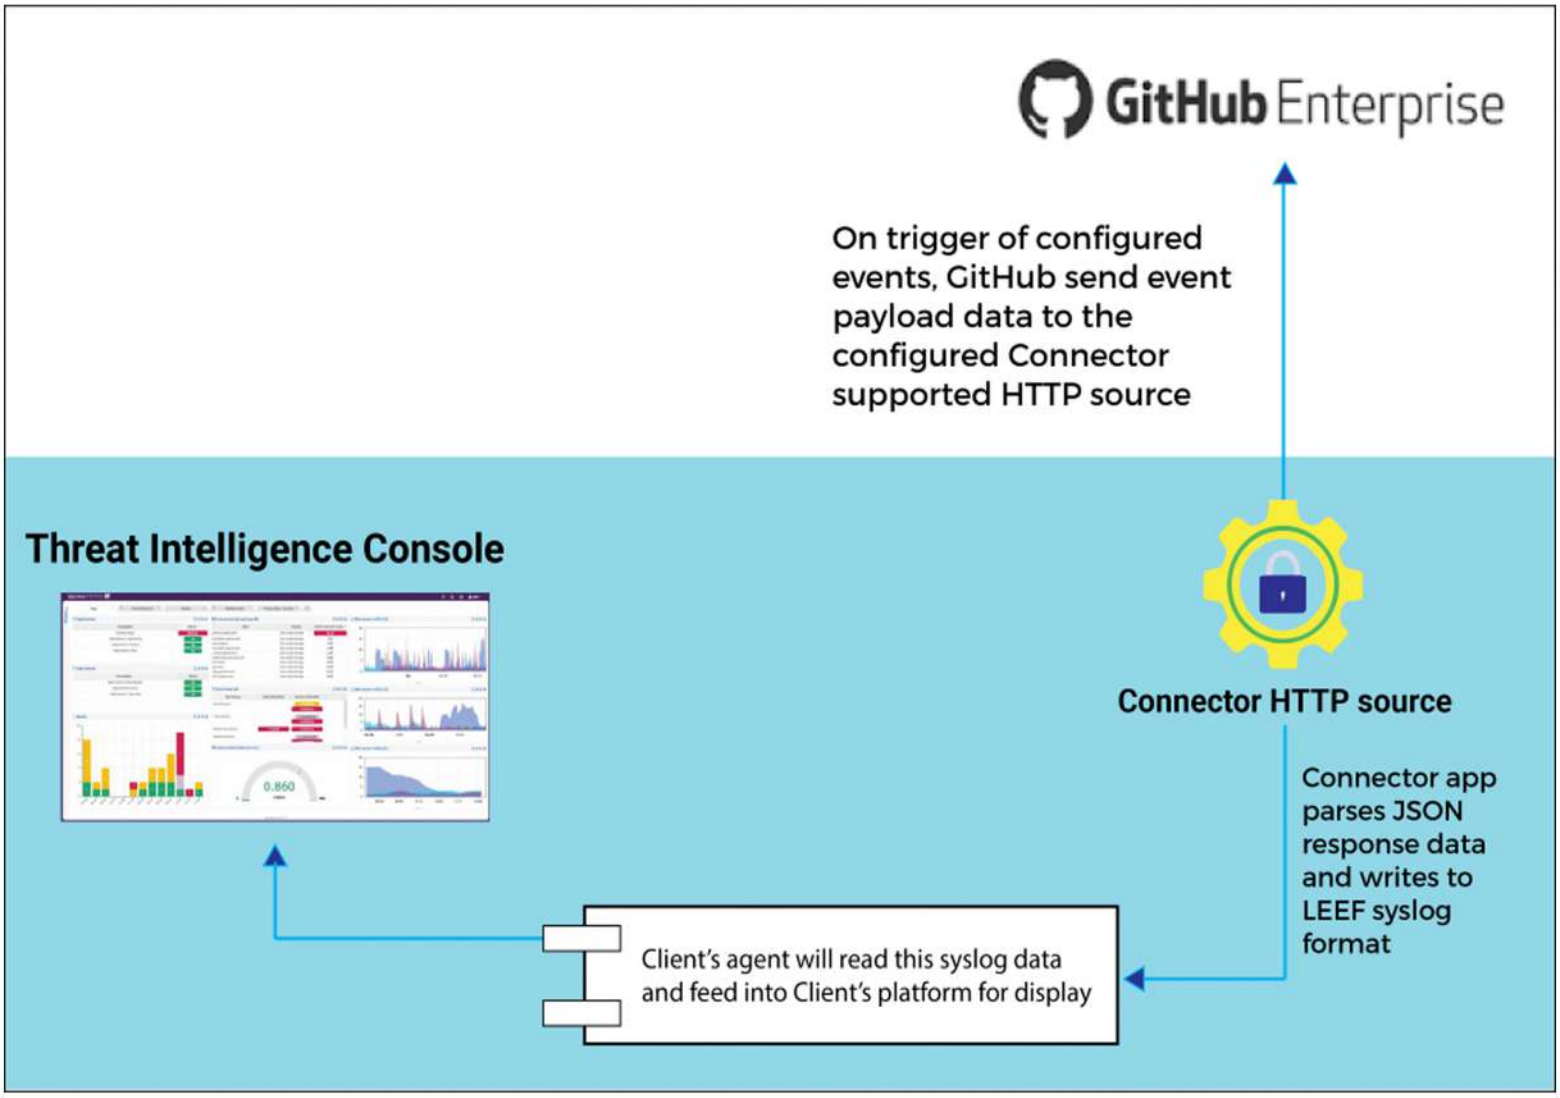
GitHub integration with Threat Intelligence Platform



Customer

Customer is a leading Threat Intelligence solution provider.
They provide a platform for companies to aggregate and act upon Threat Intelligence.

Requirement

Customer requested for the integration of their product with the GitHub

Technology Solution

- Connector ingests GitHub events via a webhook. The webhook is configured to point to the Connector supported HTTP source.
- The events configured for monitoring were as follows: Repository, Team, Pull, Push, Project, Fork, membership, repository_vulnerability_alert etc.
- The webhook was configured at Organization level and passes the events data in JSON format
- The Connector receives the events data and parses response data and writes in the LEEF format
- Selenium automation scripts were used to generate the GitHub events for testing
