

# Symantec DeepSight integration with Threat Intelligence Platform

Connector uses the DeepSight APIs to fetch the Feed data from Symantec DeepSight

## Threat Management Console

Connector

Connector app parses CSV Feed data and writes to SysLog format

Agent will read this SysLog feed data, process and feed into platform for display

## Customer

Customer is a leading Threat Intelligence solution provider.

They provide a platform for companies to aggregate and act upon Threat Intelligence.

Customer requested for the integration of their product with the Symantec's DeepSight Data Feed

## Requirement

## Technology Solution

- Connector uses the DeepSight's API to fetch DeepSight's various data feeds (IP Reputation and Domain/URL Reputation) in CSV format
- The Connector receives the events data and parses response data and writes in the Syslog format
