

TeamCity Plugin for leading Web App Scanner

Web App Scanner

Plugin makes REST API calls to the platform to perform web app scan

Plug-In

Customer is a leading SaaS based Application security solution provider

Customer

Client requested for the development of certified TeamCity plugin that would perform application vulnerability scans into existing continuous integration pipeline.

Requirement

Technology Solution

- Sacumen developed the certified native TeamCity plugin
- The plugin was written in Java language using the TeamCity plugin framework
- After TeamCity pipeline builds the web app, the plugin launches a scan on the selected web application with the configured options. Plugin makes the REST API call to the platform to perform the scan
- User has ability to define the failure criteria. Failure criteria is built based on severity of vulnerabilities, QID values etc. If the failure conditions are met then the Plugin will fail the build
- After scan is performed, customers will be able to see results in TeamCity
- Support for TeamCity Enterprise 2017
- The plugin comes in the form of a zip file. Once you have the zip file, log into your instance of TeamCity and go to Administration. Under Administration, click Plugins List. On the Plugins List page, click Upload plugin zip
