JIRA integration with Security Rating Platform

Security Rating Platform

The JIRA app makes REST API calls to the Rating end point to fetch the Overall/Factor/Issues level findings events data

Jira

Customer

Customer is a leading Security Rating provider. It rates cybersecurity postures of corporate entities through the scored analysis of cyber Threat Intelligence signals for the purposes of third party

Requirement

Customer requested for the development of JIRA app to integrate with its rating platform

Technology Solution

Sacumen developed the JIRA app (for JIRA Cloud) in Node JS that performs the following:

- Fetch the Overall/Factors/Issues Level findings data
- Application set-up (Settings, Schedulers)
- Create JIRA Issues based on conditions
- Create custom fields in JIRA as required
