

Personal Data Privacy and Protection platform integration with Microsoft OneNote

Microsoft Graph OneNote API returns the requested data for the scan

Connector app connects to the Big Table instance in a project using service account to fetch the data

PII Data Scanning Application

Connector app retrieves the requested data, processes the response data, sample it based on predefined sampling techniques, parse the response and sends it to the Customer Platform

Connector App

Connector triggers a call to the connector app to initiate a scan on the Microsoft Onenote details

Customer

Customer is a leading Personal Data Privacy and Protection provider.

It enables organizations to discover and map all types of data from all enterprise data sources; automatically classify, correlate, and catalog identity & entity data into profiles; manage and protect enterprise data with advanced data intelligence; and automate data privacy and protection.

It identifies all PII across structured, unstructured, cloud & Big Data.

Customer requested to build a Connector app to integrate their platform with Microsoft OneNote to scan the teams data for finding the PII information

Requirement

Technology Solution

- The Microsoft Graph API offers a single endpoint to provide access to rich, people-centric data and insights exposed as resources of Microsoft 365 services.
- Microsoft OneNote is a program for free-form information gathering and multi-user collaboration. It gathers users' notes, drawings, screen clippings, and audio commentaries.
- Sacumen developed the Connector app to integrate Microsoft OneNote using C# 8.0 (.NET Core 3.0). The Connector app performs the following actions:
 - Set up the prerequisites
 - O365 Account with Admin privileges
 - Registered app which will give the client id & client secret
 - Grant the required permissions (Group.Read.All and Group.ReadWrite.All)
 - Requests for access token by using OAuth 2.0 client credentials grant flow which uses the tenant id, client id and the client secret.
 - Retrieves the onenote page and its content details using the Microsoft Graph OneNote API and the access token.
 - Samples the fetched data using predefined sampling techniques.
 - Formats the data and pass it to the customer.
