

ServiceNow integration with Security Rating Platform

Security Rating Platform

The SNOW app makes REST API calls to the Rating end point to fetch the Overall/Factor/Issues events data

servicenow®

Customer

Customer is a leading Security Rating provider. It rates cybersecurity postures of corporate entities through the scored analysis of cyber Threat Intelligence signals for the purposes of third party

Customer requested for the development of SNOW app to integrate with its rating platform

Requirement

Technology Solution

Sacumen developed the SNOW app (London) that performs the following:

- Fetch the Overall/Factors/Issues data
- Application set-up (Settings, Schedulers, Incident creation rules – automatically create incidents when certain criteria is met)
- Dashboard to show the score, issue count etc
- Display Active incident related to rating
- Historical data (score history, closed incidents, inactive events logs)
